Features

Key	Summary:
RD-10650	A number of security updates were patched that were found in the Debian operating system (DLA-3532-1).
RD-10666	A number of security updates were patched that were found in the Debian operating system (CVE-2022-2068).
RD-10672	A feature was added to the engineering pages allowing the user to see the BIOS version in the CCU overview page.
RD-10749	A feature was added to the mosquito module allowing for a custom configuration file.
RD-10778	A new AP mac prefix was added to the default set of OBN.
RD-10847	A change was made to MAR3 to ensure that the STDOUT logging is done to /var/log instead of /tmp.

Defects

Key	Summary:
RD-10841	An issue in the puppet manifests related to autologin was blocking a normal installation from working. This has been resolved.
RD-10779	Under certain situations the zabbix-proxy database file was becoming corrupt after an upgrade, this has been resolved.
RD-10785	The deployment scripts were modified to support the new hardware identifier for the 4600-2Ax variant of the 4600v2.
RD-9012	Under certain circumstances, MAR3 was generating data that was causing the NMS to show wrong ICCIDs for modems. This has been resolved.
